

EXPLORE

We help your team elaborate on opportunities in your own business—e.g., improving operational efficiency, productivity, revenues, and profits—by identifying bottlenecks; infusing intelligence into your workflow through the application of technologies such as AI/ML (Artificial Intelligence/Machine Learning), IoT (Internet of Things), and RPA (Robotic Process Automation); and re-engineering your process.

Prerequisites for the engagement:

- Documentation or understanding of your current process
- Pain points (any concerns that have already been identified)
- Vision (any ideas that have already been identified)
- Access to key enterprise employees responsible for process

Talent Deployed:

Business Analyst, Process Architect, AI Evangelist

Deliverables - Business acceleration opportunities document:

- This document will identify processes that can be improved within your enterprise (or within a division or department)
- Description of business processes, both in current state and accelerated state
- Impact of process automation and acceleration in terms of costs, efficiencies, and productivity
- Recommended transition strategy and approach to achieve acceleration
- List of AI/ML, IoT, RPA, and other tools required for acceleration
